

SAFETY MANAGEMENT POLICY

As Executive Director I recognise the importance of managing safety throughout EZE Solutions Pty Ltd. It is my policy to do all that is reasonably practicable to maintain the highest possible safety standards across all the Company's business activities.

This policy conveys my attitude and expectation in supporting and endorsing the Company's efforts on safety management and risk reduction.

Policy implementation will be achieved by compliance with legal and industry requirements along with the provision of safe and adequate equipment, materials and work systems, strong safety management and training to ensure competence in all areas of our workforce.

Our approach in the management of safety will reflect not only our published safety principles, but also our culture of employee and client care.

Co-operation on the part of employees at all levels is vital to the success of the objectives of this safety statement and is actively encouraged. Employees are supported when operating off site, in the knowledge that if safety control measures fall short of corporate and individual expectations, then work should not proceed until an appropriate safe system of work is implemented.

The achievement of safety through techniques of risk reduction is a primary objective and I will ensure the company continues to enjoy a strong safety ethos throughout. This will be further strengthened by a commitment to ensure that disciplinary proceedings will not be instigated in response to any form of inadvertent error.

The organisation and arrangements supporting the policy statement provide a rationale for decision making for employees at all levels so that safe and consistent solutions can be found. In this way the safety risks to the Company and its workforce will be reduced.

DAVENDER JAIN

EXECUTIVE DIRECTOR,
